

ClearSight

User Roles and Access to ClearSight, 2022–2023

ClearSight assessment systems are secure and role-based. To access any ClearSight assessment system, user accounts need to be set up for each district and school user involved in the assessment process. User accounts are set up in the TIDE (Student & User Management) System. Access to data residing in the systems depends on a user's role and district-school associations. For example, district-level users can view and manage data for all schools in their districts; school-level users can view and manage data for their own schools.

A user can create user accounts for roles that are lower in the hierarchy (see Figure 1). For example, a district-level user can create user accounts for school-level users and teachers in his or her district; a school-level user can create accounts for teachers in his or her school.

Data in ClearSight refers to information about users, students, administrations, and assessment results. Data access, controlled by user role, is also controlled by jurisdiction, meaning district and school (Figure 2).

For example, a School Coordinator in School 1 will have visibility to data about teachers, students, rosters, and administrations in School 1.

Teacher 2 in School 2 will have visibility to data about students rostered to him or her and administrations taken by students that are part of those rosters.

To see detailed tasks that can be taken by each user role, see Tables 1 and 2 on the following pages.

Figure 1. ClearSight User Access Creation by Role

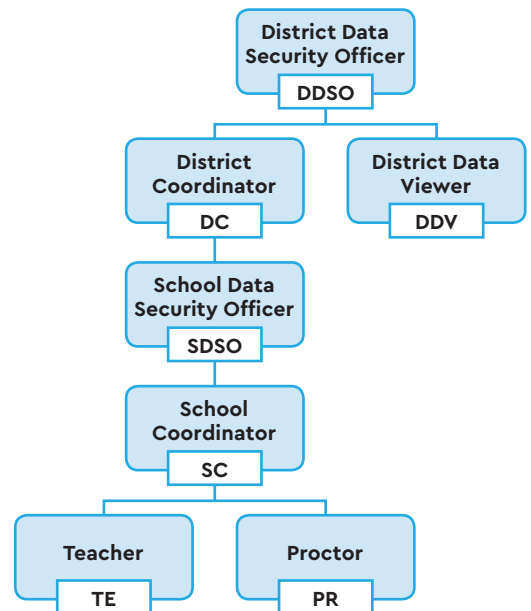

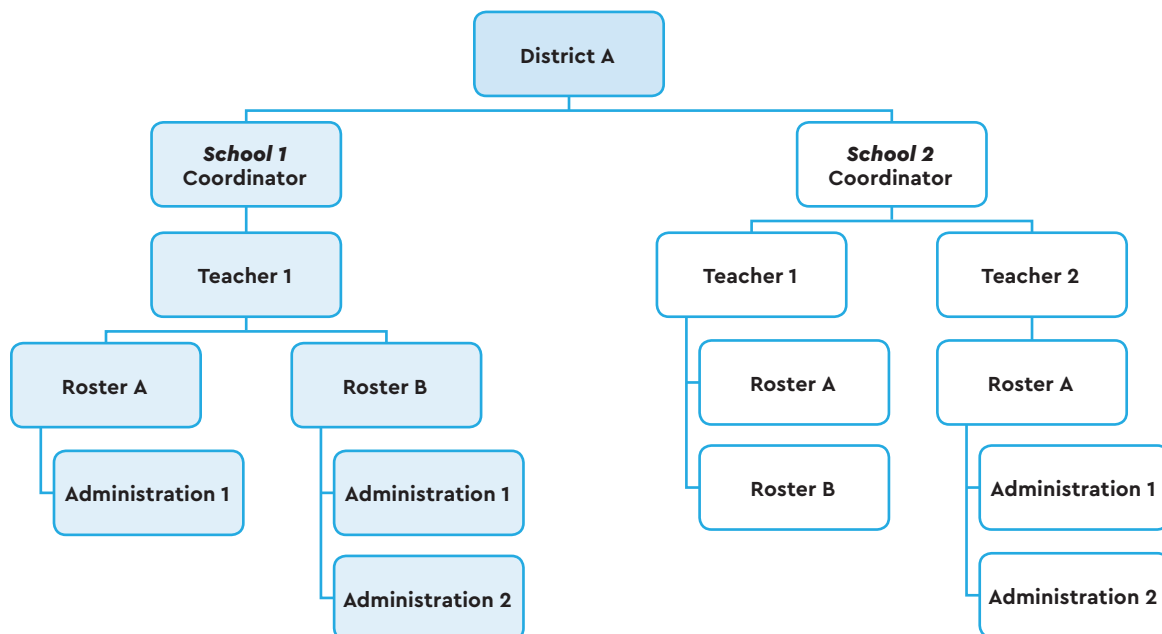

Figure 2. Data Access by User Role and Jurisdiction
